PROFESSIONAL SUMMARY

Aspiring AI/ML Engineer with a strong foundation in Computer Vision and Generative AI. Proven track record in developing RESTful APIs and building end-to-end machine learning pipelines. Passionate about an R&D-first approach to solving complex spatial design problems. Highly analytical team player with a focus on code quality, scalable cloud deployments (Azure), and the "OneCyncl" spirit of collaborative innovation.

TECHNICAL SKILLS

- **Languages:** Python (Advanced), SQL, Bash.
- **AI/ML Frameworks:** TensorFlow, PyTorch, Scikit-learn.
- **Computer Vision:** OpenCV, Pillow, Scikit-image, Image Segmentation.
- **Generative AI:** LLMs, LangChain, Vector Databases (Pinecone/Milvus), RAG Pipelines.
- **Backend & Cloud:** FastAPI, Flask, REST APIs, Azure DevOps, Docker, CI/CD.
- **Tools:** Git, Unit Testing (PyTest), Jira, Postman.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering *Specialization in Artificial Intelligence* [Your University Name], Kerala | **GPA: 9.2/10** | Graduation: 2025

PROFESSIONAL EXPERIENCE

AI/ML Engineer Intern | TechSol Innovations *June 2024 – December 2024*

- Developed a **Computer Vision** prototype for automated floor plan analysis using **OpenCV** and **PyTorch**, reducing manual entry time by 40%.
- Built and deployed **RESTful APIs** using **FastAPI** to integrate ML models into client-facing web applications.
- Collaborated with Data Engineers to design **SQL and Vector Database schemas** for efficient retrieval of high-dimensional image embeddings.
- Implemented **CI/CD pipelines** using **Azure DevOps**, ensuring automated testing and seamless deployment of model updates.

KEY PROJECTS

AI-Powered Interior Design Assistant (Generative AI & CV)

- Created a POC that uses **Stable Diffusion** and **LangChain** to allow users to redesign room spaces via text prompts.
- Implemented a **Vector Database** (Milvus) to store and query furniture catalogs based on visual similarity.
- Optimized model inference speed by 25% using quantization techniques.

Automated Quality Inspection System

- Developed a Deep Learning model using **TensorFlow** to detect defects in glass and wood surfaces with 96% accuracy.
- Designed a scalable data pipeline to handle real-time image processing from high-resolution industrial cameras.

CERTIFICATIONS & ACHIEVEMENTS

- **Deep Learning Specialization** – Coursera (DeepLearning.AI)
- **Microsoft Certified: Azure AI Fundamentals**
- **Winner**, National Level AI Hackathon (Focus: Smart City Infrastructure)

SOFT SKILLS

- **R&D Mindset:** Continuous learner updated on the latest research papers in CV and GenAI.
- **Communication:** Experienced in presenting technical designs to non-technical stakeholders.
- **Mentorship:** Acted as a Peer Mentor for 15+ students in the University AI Club.
